Animal Health

Porcilis® Glässer

The first Glässer's disease vaccine to pass EU regulatory standards. This vaccine based on the whole bacterium of *Haemophilus parasuis*, cross protects against other virulent *H. parasuis* serotypes and confers long lasting immunity.

Description

Porcilis Glässer is an inactivated Diluvac Forte adjuvanted vaccine. Porcilis Glässer is intended for the protection of pigs against *Haemophilus parasuis* infections, causing Glässer's disease, also known as 'transport disease'.

Composition

Porcilis Glässer contains inactivated cells of *Haemophilus parasuis* bacteria. The active component is suspended in Diluvac Forte.

Formulation

Ready-to-use inactivated vaccine.

Indications

For active immunisation of pigs as an aid to the control of Glässer Disease.

Vaccination

Pigs may be vaccinated from 5 weeks onwards, by giving two doses, 2 weeks apart.

Method of administration

2 ml by intramuscular injection.

Withholding period

None

Presentation

Vials containing 10, 25, 50 doses.

Storage

Store at a temperature of 2-8°C. Protect from light. Do not freeze.

Contra-indications

Do not vaccinate piglets under 5 weeks of age.

Precautions

- Vaccinate healthy pigs only
- Allow the vaccine to reach room temperature (15-25°C) before use
- Shake the vaccine vigorously before and during use
- Use sterile syringes and needles
- If not used within 3 hours, opened bottles should be discarded
